SUMMARY

Skilled in Data Science, DevOps, Cloud, & AI Agentic Development. I aim to leverage my skills in a tech & AI driven role to create impactful solutions. I seek opportunities to collaborate with diverse teams & contribute to the development of innovative solutions/ products. My goal is to continuously learn & grow within an organization that values creativity & professional development.

EXPERIENCE

Data Science Intern

ExactSpace Technologies

11/2025 - 08/2026 Bangalore

- Worked as a Data Scientist, applying ML/DL techniques to improve data-driven solutions.
- Built an LLM-driven predictive-maintenance agent across 5 industrial clients that forecasts catastrophic equipment failures before breakdown, graph-expands each incident across related systems, equipment and sub-components within a client-tunable 24h lookback, fuses risk, telemetry and wear-out signals, and routes human-approved incident reports to maintenance, cutting unplanned shutdown loss by ~33%.
- Automated an insight-analysis incident reporting layer at BPCL, cutting manual triage effort by ~60% via a stale-incident digest and an incident x anomaly coincidence alert that fires only when both channels breach threshold on the same entity.
- Built AutoMetaAI, which reduced manual effort by ~90%. It's based on a Bayesian n-gram inference engine that auto-completes missing industrial sensor metadata across 7+ attributes per tag via length-weighted posterior scoring with a hybrid retrieval-then-prediction pipeline with token-affinity enhancement.
- Built the load-stratified industrial benchmarking engine: adaptive IQR + rolling-MAD outlier removal and percentile operating bands (q005/q50/q995), serving as the baseline layer for platform-wide anomaly detection.
- Designed a custom concept-drift detector (Median-IQR statistic fused with approximate Wasserstein distance) and an unsupervised k-means regime detector for steady vs volatile operating modes which improved the accuracy by ~25%.
- Developed the equipment risk-scoring stack (tag→group→equipment) with multi-window weighted OOC+deviation scoring, sigmoid-logistic risk transform, and shipped a historic OOC/risk backfill endpoint supporting 5-year lookbacks for retroactive audits.

Data Science Intern

Minify Technologies

04/2025 - 06/2025 Hyderabad

- Worked as a Data Scientist, building production AI agents for cloud operations and FinOps.
- Built an AIOps Incident Response & Root Cause Analysis agent on AWS (CloudWatch + CloudTrail + X-Ray + EventBridge + SQS + Claude 3.7) that ingests alerts, investigates logs/deployments/traces, forms evidence-backed RCA hypotheses, and recommends or executes remediation through a human-approval gate, reducing MTTR by ~50%, investigation time by ~50%, and improving RCA accuracy to ~85%.
- Built an AI FinOps agent for AWS cost optimization (Cost Explorer API + Cost & Usage Report → S3 → Athena → Claude 3.7 recommendation engine with human approval → AWS API/SSM action + savings verification) surfacing idle/oversized resources for a projected ~10% average reduction in AWS spend.
- Gained hands-on experience with Git, GitHub, JIRA, Linux/Bash, AWS (EC2, Lambda, CloudWatch, EventBridge) via AWS CLI, CI/CD with Jenkins, Docker, Terraform IaC, and contributed to system design (HLD & LLD) and databases (MongoDB, PostgreSQL).

DevOps Intern

Havells India Ltd

08/2024 - 09/2024 Delhi

- Worked with development and operations teams to automate workflows, manage cloud infrastructure, and ensure smooth deployment of applications.
- Configured CI/CD pipelines using Azure DevOps, managed Azure Cloud infrastructure, and monitored application performance using Azure tools.
- Gained hands-on experience with Bash scripting and Azure CLI for cloud automation, contributing to improvements in the development lifecycle.
- Collaborated with cross-functional teams to improve productivity and drive efficiency.

SKILLS

Data Science/AI-ML

NLP, Bayesian Inference, Time Series Analysis, Anomaly Detection, Statistical Process Control (SPC), Statistical Modeling, Supervised Learning, Unsupervised Learning (k-Means), Retrieval-Augmented Generation (RAG), Deep Learning (PyTorch, TensorFlow), Scikit-learn, pandas, NumPy, SciPy, Matplotlib, Vector Databases (ChromaDB).

Languages

Python, C, C++, Java, Bash

Cloud & DevOps Tools

Azure Cloud, AWS Cloud, Azure DevOps, Azure CLI, AWS CLI, Linux, Git, JIRA, Jenkins, Terraform, Docker.

Backend & Database

Python (Flask), NodeJS, ExpressJS, SQL, MySQL, PostgreSQL, MongoDB.

Frontend

NextJS, ReactJS, JavaScript, TypeScript, HTML, CSS.

EDUCATION

B.Tech Computer Science & Engineering

SRM Institute of Science & Technology

05/2025

CGPA

8.99 / 10

Class XII (CBSE)

Central Academy Sr. Sec. School

07/2021

Percentage

82 / 100

Class X (CBSE)

Chinar Public School

05/2019

Percentage

82.6 / 100

CERTIFICATIONS

AWS Academy Graduate - AWS Academy Cloud Architecting

AWS Academy Graduate - AWS Academy Cloud Foundations

Postman API Fundamental Student Expert

DevOps on AWS

NPTEL Introduction to Programming in C

Object Oriented Programming (OOPS)

ChatGPT & Other AI Guide

PROJECTS

AgentTForge

03/2026

Key Skills: Python, GRPO, TRL, Qwen2.5-7B, LoRA, FSDP, vLLM, Synthetic Data, Agent Evaluation

- Built an end-to-end conversational-agent post-training pipeline for voice and text agents using GRPO and rejection sampling, with synthetic dialogue generation through coverage, diversity, and leakage quality gates.
- Implemented an execution sandbox with outcome verifiers designed against reward exploitation, and fine-tuned Qwen2.5-7B using TRL, LoRA, and FSDP on multi-GPU infrastructure. Deployed inference with vLLM for fast rollouts.
- Built an evaluation harness measuring multi-turn tool-use accuracy and long-horizon behavior, and established a production feedback loop for continuous model improvement.

PlantPulse-Cyclone-OPS

10/2025

Key Skills: Python, Time-Series Analysis, Machine Learning, Data Processing

- Built a data analysis system that finds machine shutdowns, groups operating patterns, and spots unusual behavior in factory sensor data.
- Creates 1-hour predictions and compares different forecasting models to find the most accurate one.

DocFoundry-RAG

10/2025

Key Skills: Python, RAG, SentenceTransformers, ChromaDB, NLP

- Developed a fully offline, CPU-only RAG system (Semantic Search Engine) for intelligent querying across enterprise documents (PDF/DOCX/TXT).
- Designed two-stage retrieval with dense embedding search and CrossEncoder reranking.

UnitySphere

10/2024

Key Skills: Next.js 14, TailwindCSS, Socket.io, Prisma, MySQL, LiveKit, Clerk

- A Remote Collaboration Hub with real-time messaging, file sharing, task management, and video conferencing.
- Features include message editing, role management, invite system, and customizable, responsive UI and light/dark mode.
